

**1. The Cellular Unit** - A one time installation and set up fee of \$400 and a \$100 annual maintenance fee is required. The equipment is carefully installed, including a full system test to ensure that the equipment is working properly and the service is properly reporting tank level data to Chili Gas. A cable connects the monitoring unit to a new gauge on your tank to read the level. The equipment is completely sealed and designed for years of reliable operation.

**2. The Cell Tower** - The information is transmitted via a secure, cellular network providing a reliable communication path to Chili Gas. The cellular unit reads and records your tank level multiple times per day. If a low level is detected at any one of those readings, a priority notification is immediately sent to Chili Gas. Additionally, the complete set of tank level and usage data is transmitted to Chili Gas at regular intervals so that we can be more responsive to your needs.

**3. Reports** - Chili Gas receives reports that list every tank fill with the date, time and gallons delivered, thereby creating a chronological history of all your tank activity. These reports ensure timely deliveries so you will never run out of fuel.

**4. Delivery** - Because Chili Gas is monitoring your tank levels, you can rest assured that delivery of your propane will be there when you need it.
